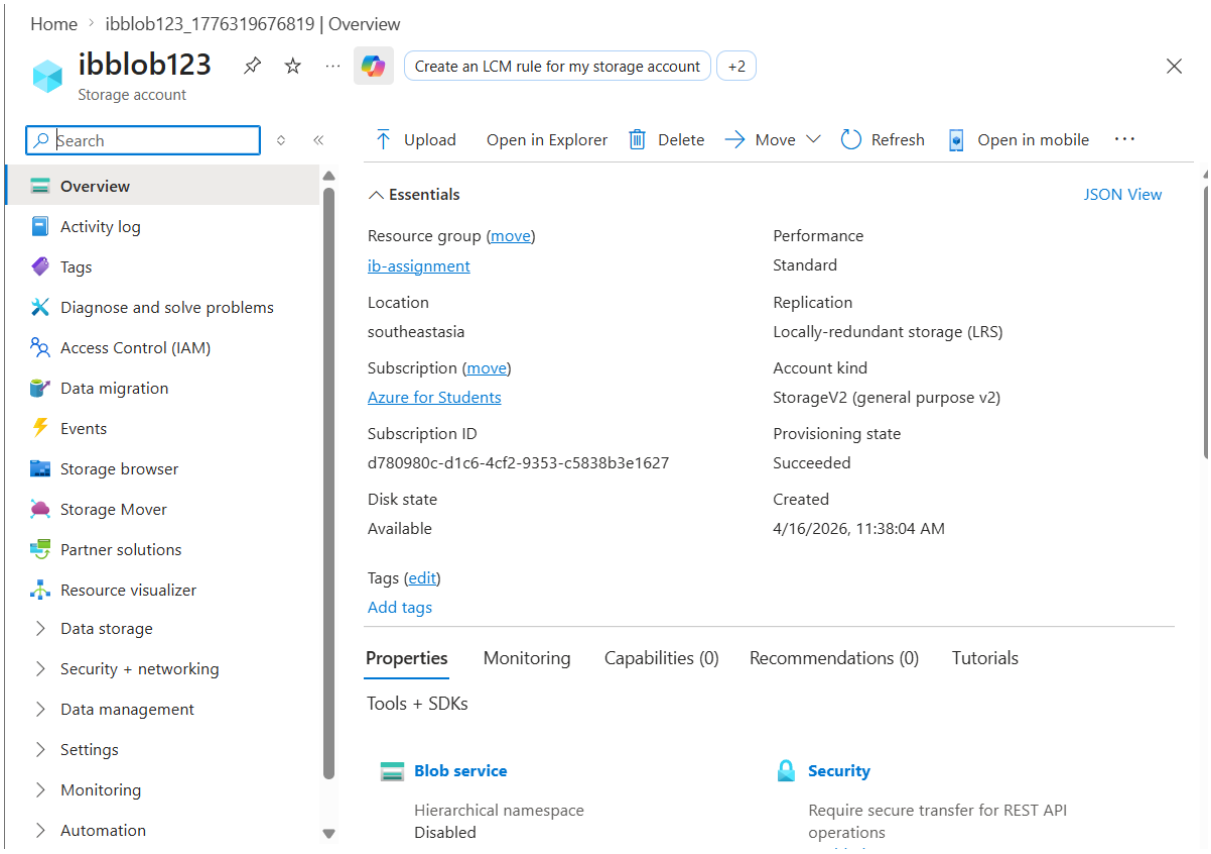
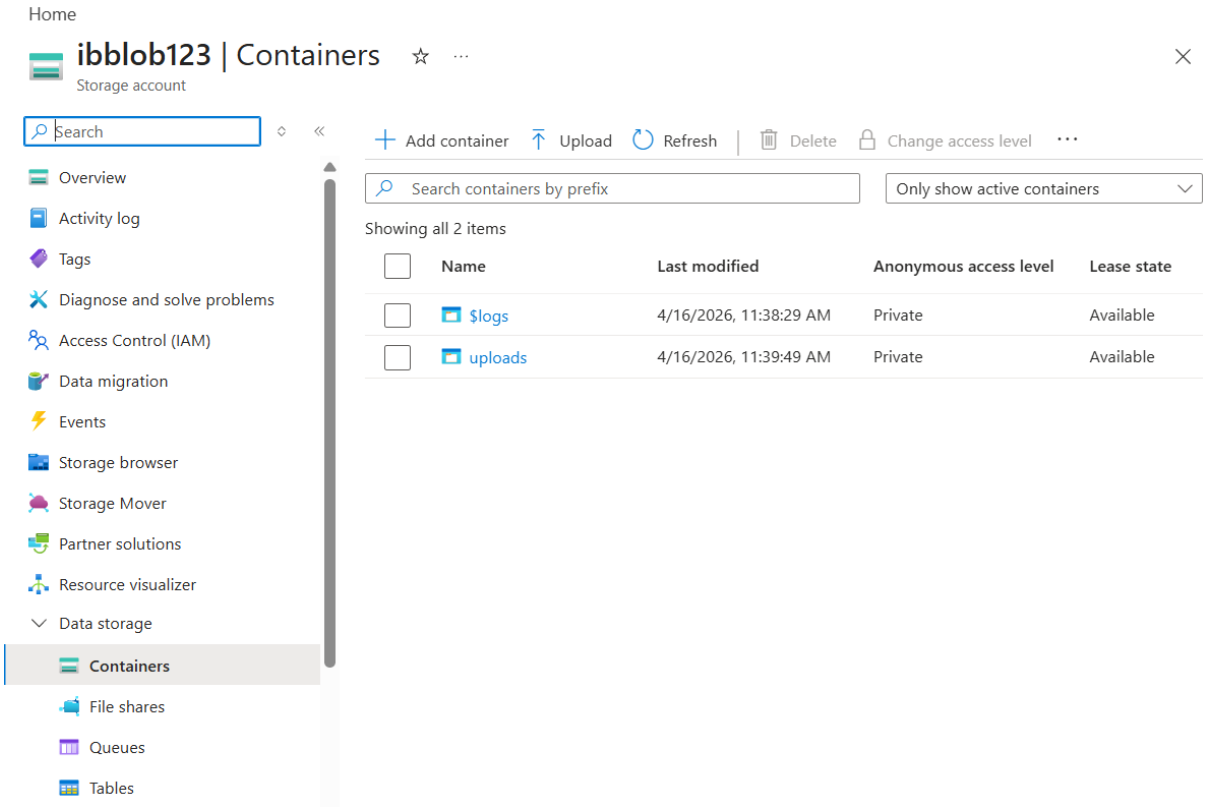
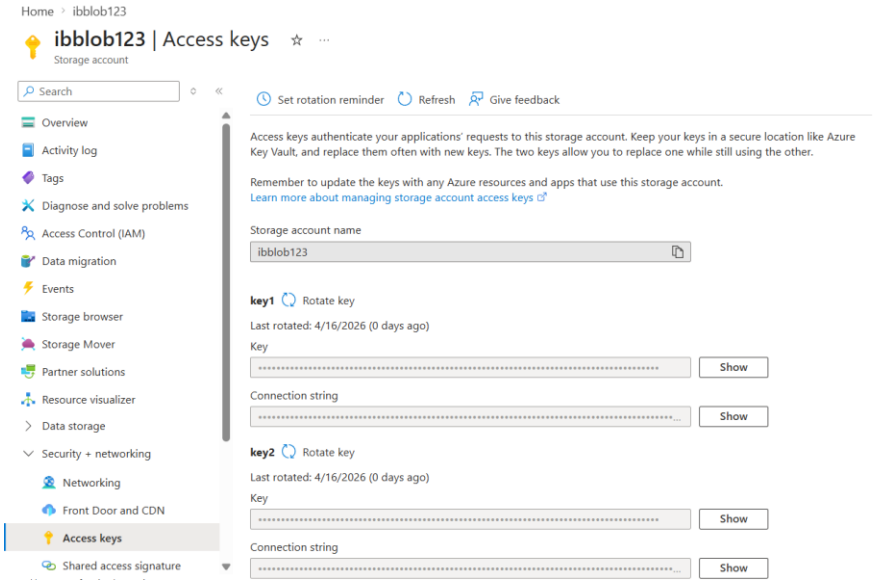
1. Creating Storage Account



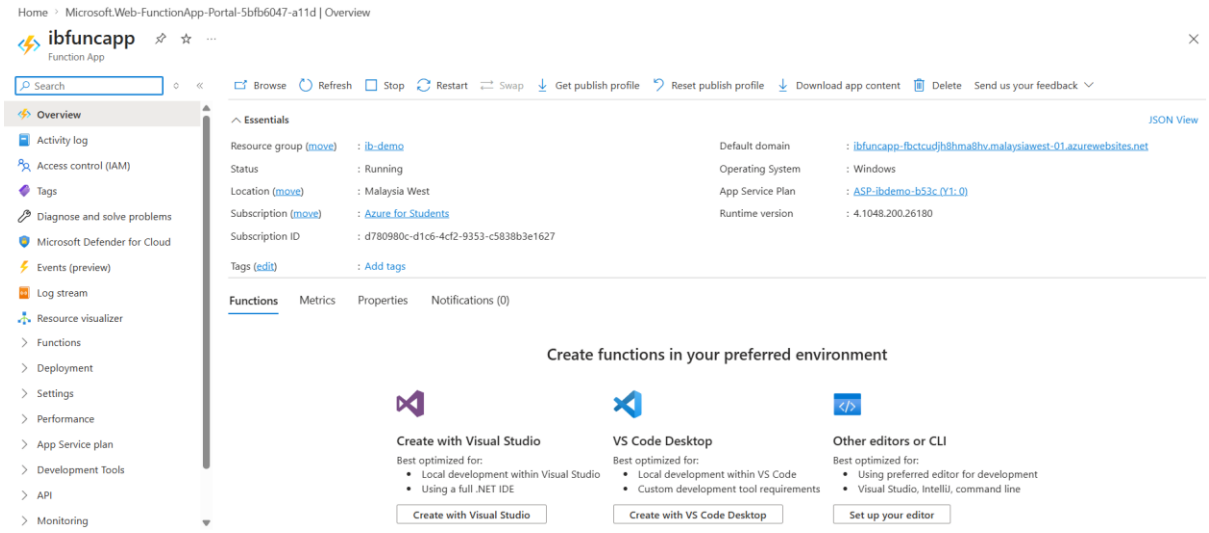
2. Creating Container



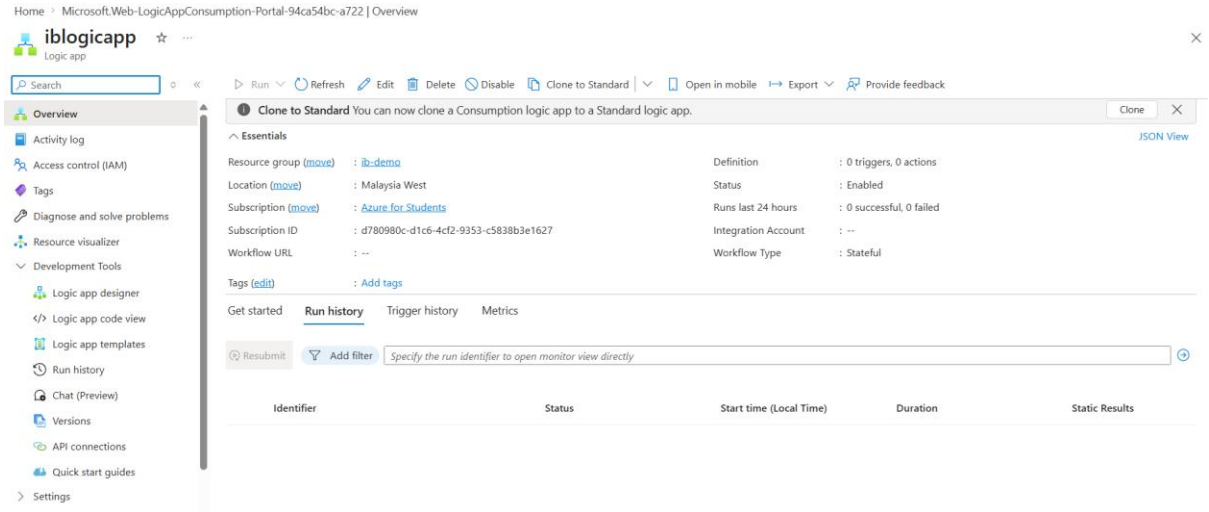
3. Copy the Access Key



4. Creating a Function App



5. Creating a Logic App



6. In the Visual Studio Creating an Azure Function App and in the URL place the LogicAppURL

```
using System.IO;
using System.Net.Http;
using System.Text;
using System.Threading.Tasks;
using Microsoft.Azure.Functions.Worker;
using Microsoft.Extensions.Logging;

3 references
public class BlobFunctionUpload
{
    private readonly ILogger _logger;

    0 references
    public BlobFunctionUpload(ILoggerFactory loggerFactory)
    {
        _logger = loggerFactory.CreateLogger<BlobFunctionUpload>();
    }

    [Function("BlobUploadFunction")]
    1 reference
    public async Task Run(
        [BlobTrigger("uploads/{name}", Connection = "AzureWebJobsStorage")] Stream blob,
        string name)
    {
        _logger.LogInformation($"Blob detected: {name}");

        var logicAppUrl = "https://prod-18.malaysiawest.logic.azure.com:443/workflows/9b65f33e9651408592f3567d2cd24eba/triggers/When_an_HTTP_request_is_received/paths/invoke?api-ver

        using var client = new HttpClient();

        var json = $"{{ \"fileName\": \"{name}\" }}";

        var content = new StringContent(json, Encoding.UTF8, "application/json");

        await client.PostAsync(logicAppUrl, content);
    }
}
```

7. Publish from Visual Studio

```
Output
Show output from: Build
2>Invalid search path 'E:\New Folder\LIB' specified in 'LIB environment variable' -- 'directory does not exist'

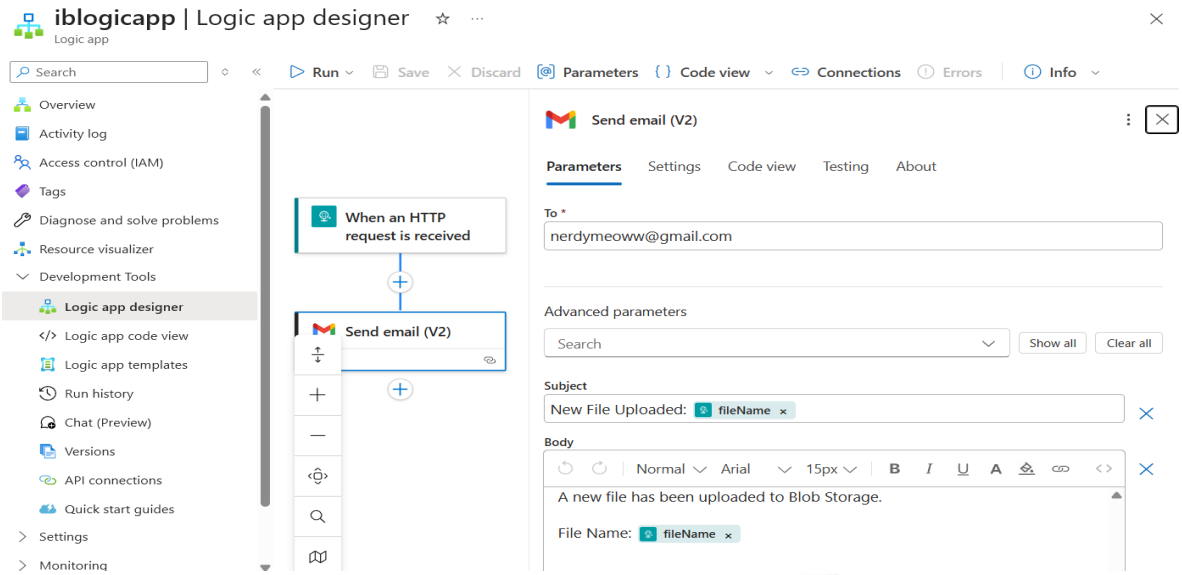
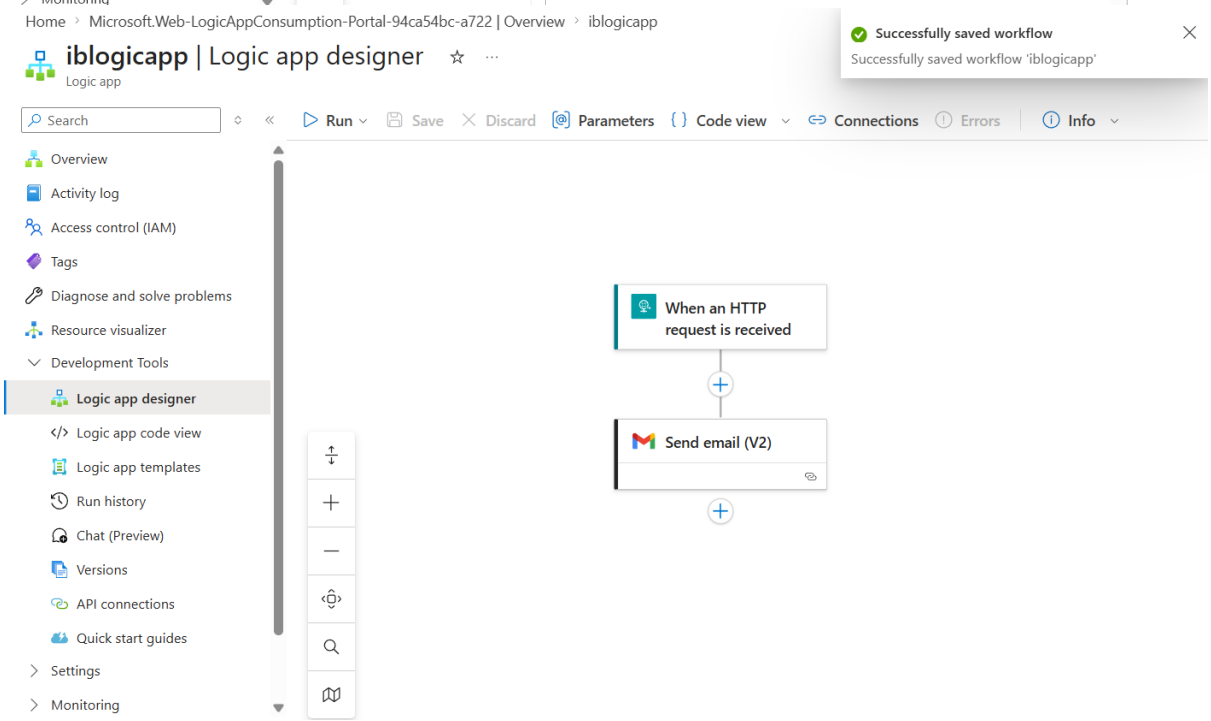
```

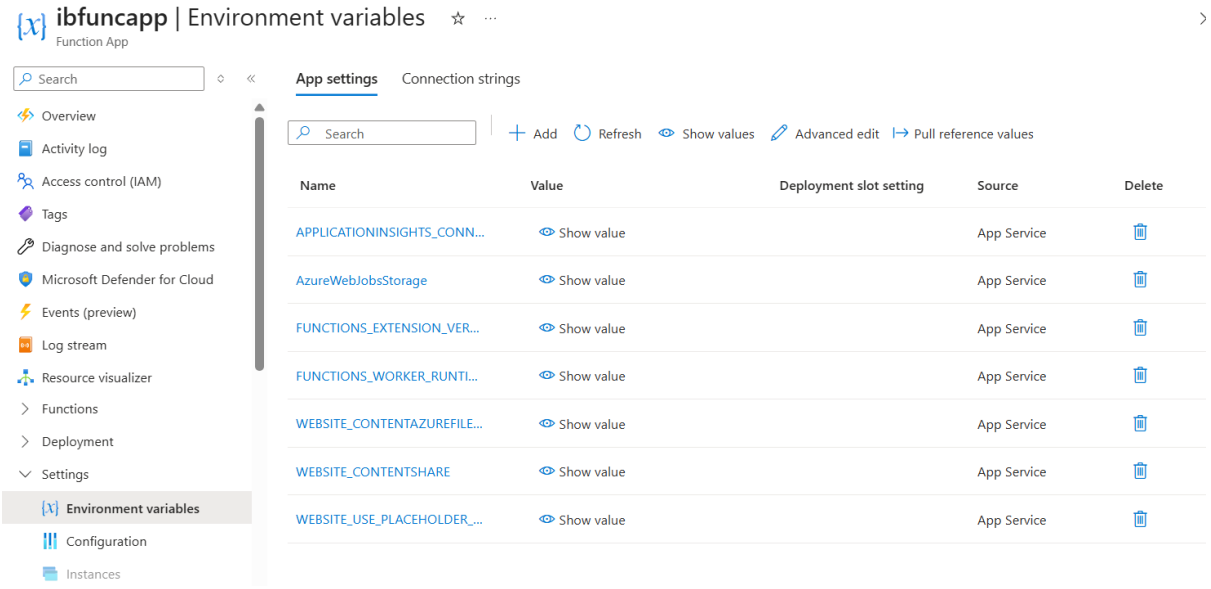
8. <u>Going to Logic App Designer</u>

- Creating HTTP Trigger
- Adding a Mail Action

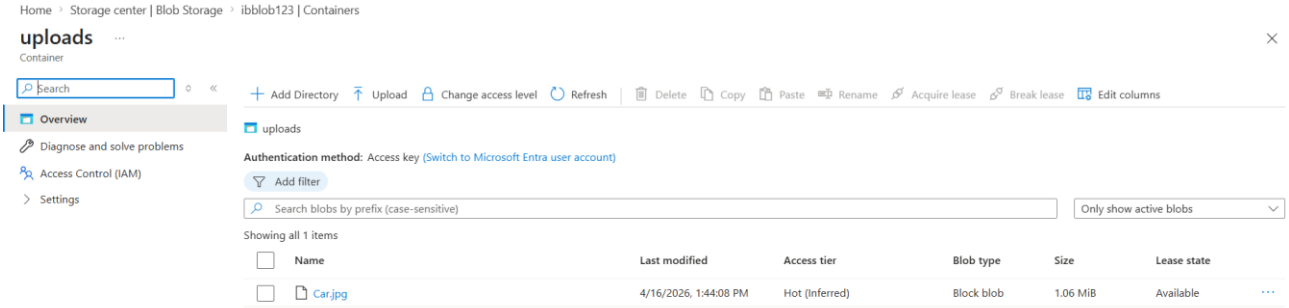




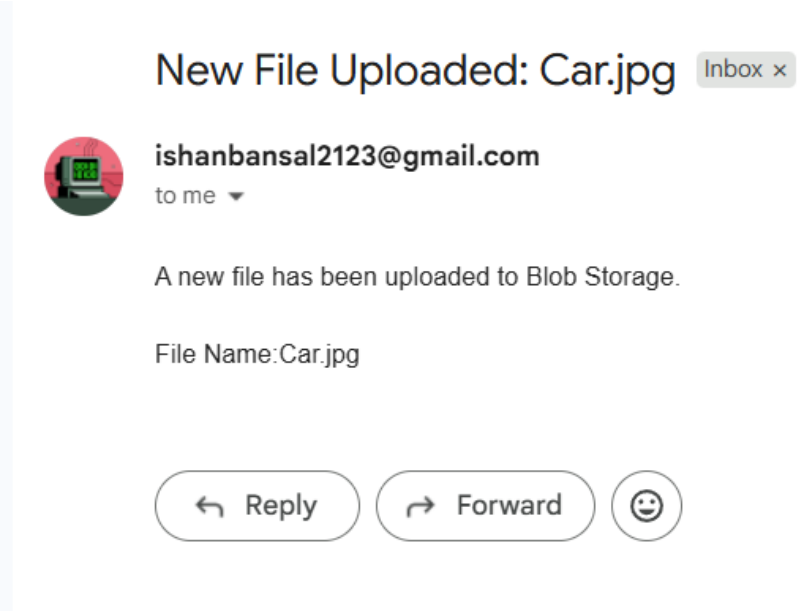
9. **Going to the Environment Variables in Function App and Look for AzureWebJobsStrorage**



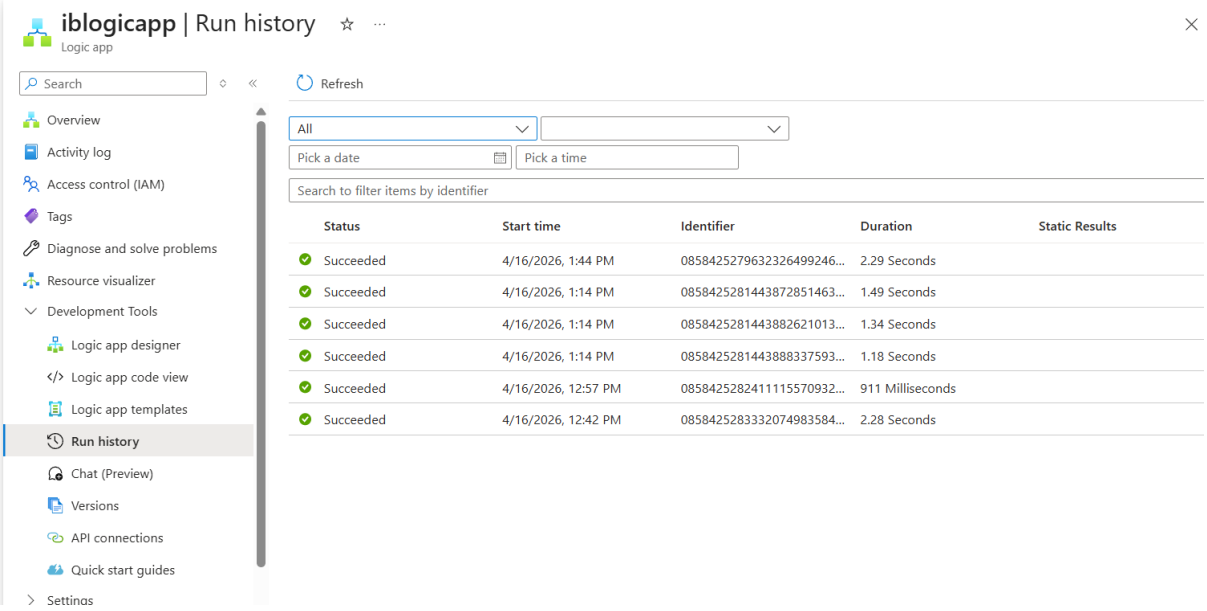
10. **Now go to Uploads Container and upload a file**

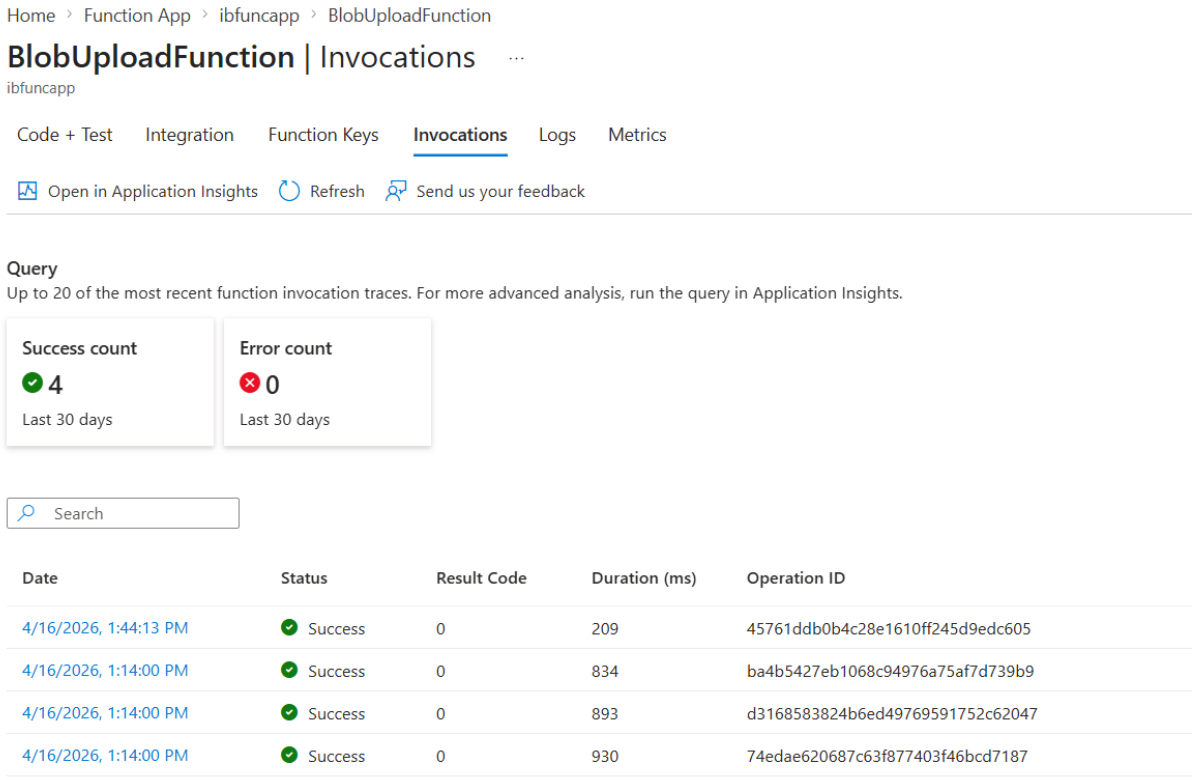


11. **After Uploading the Email will be triggered**



12. Check the Logic App Run History





13. Check the Function App Invocations
