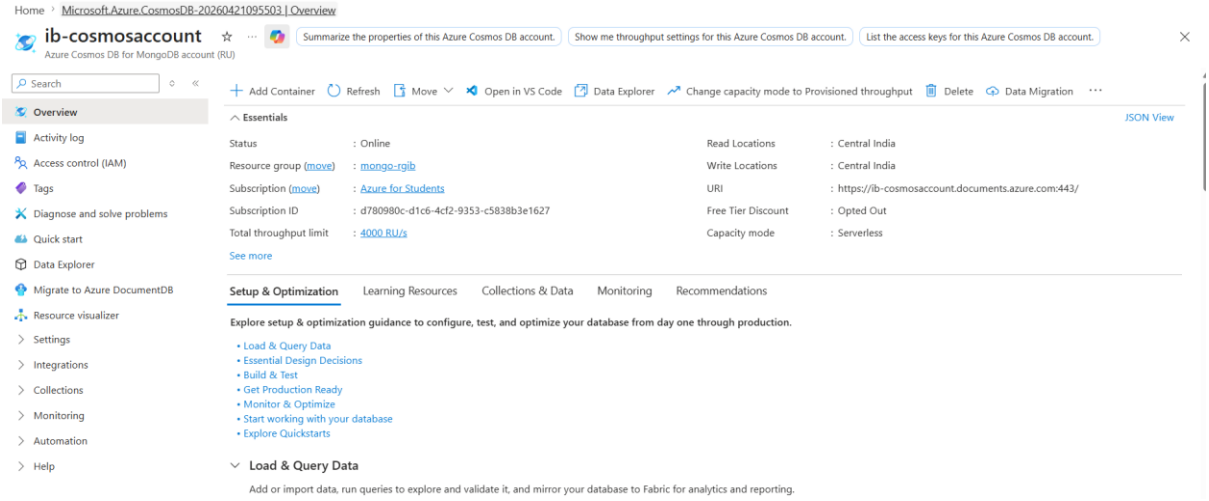
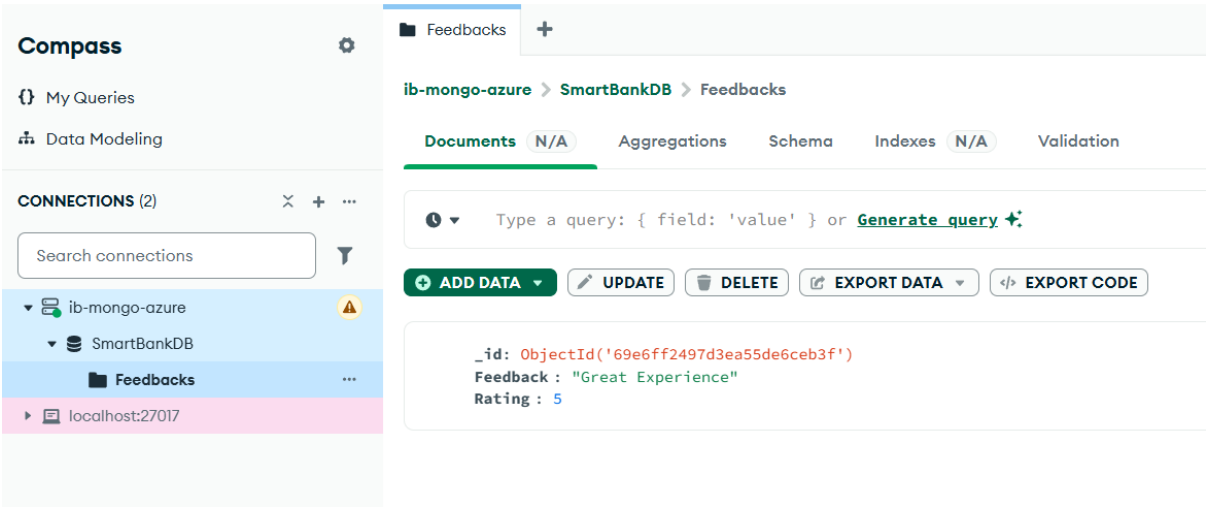
1. **Creating Cosmos DB in Azure**



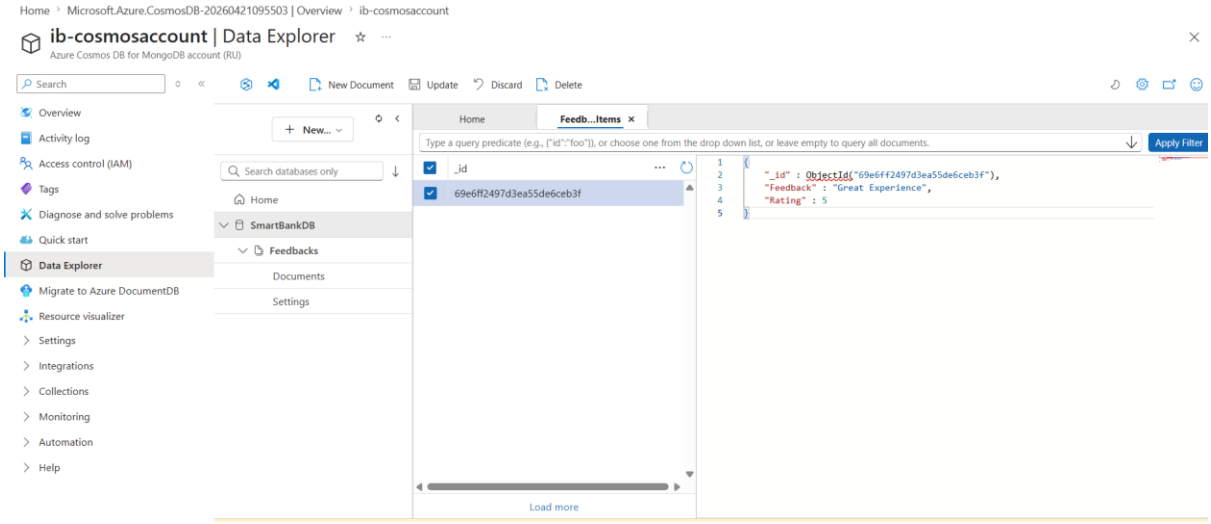
2. **Copying the connection string**

```
mongodb://ib-cosmosaccount:vdpcHqGlcev9QnJmnMe5iZIz2xjYnmclbgCFVACBmG2iMTl3JiPs4bqDuXZKwlWLaz3yoIEi1HVSACDb9QceGA==@ib-cosmosaccount.mongo.cosmos.azure.com:10255/?ssl=true&replicaSet=globaldb&retrywrites=false&maxIdleTimeMS=120000&appName=@ib-cosmosaccount@
```

3. **Opening the Compass and Adding a connection using this Connection String.**



4. Checking the Updated Database on Azure

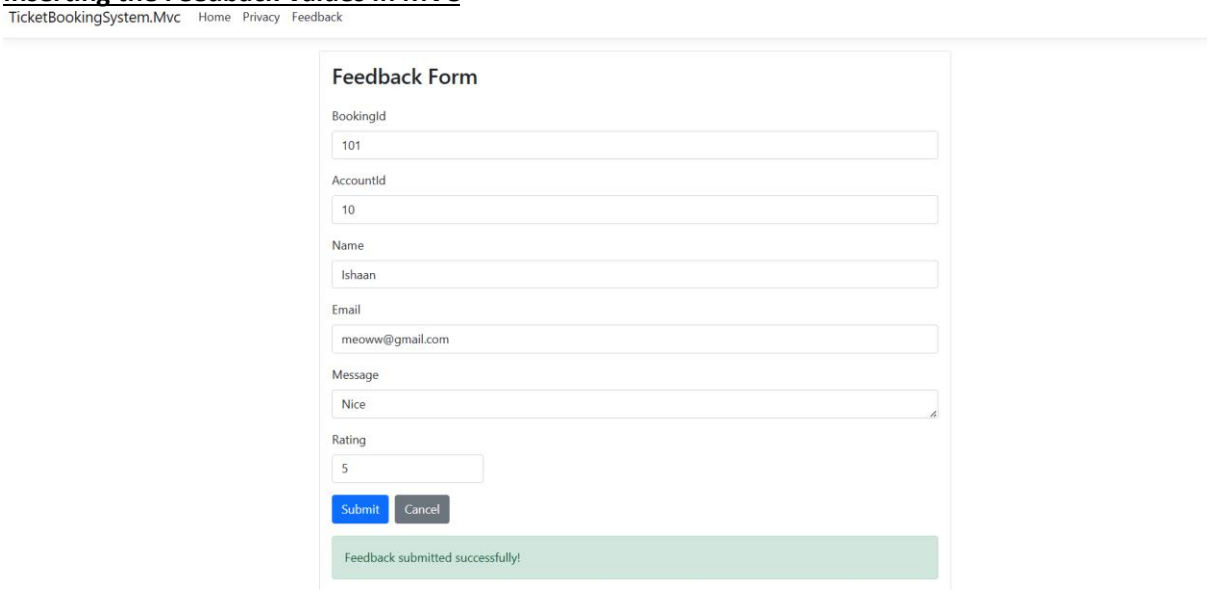


5. Connecting MVC to Mongo DB Database

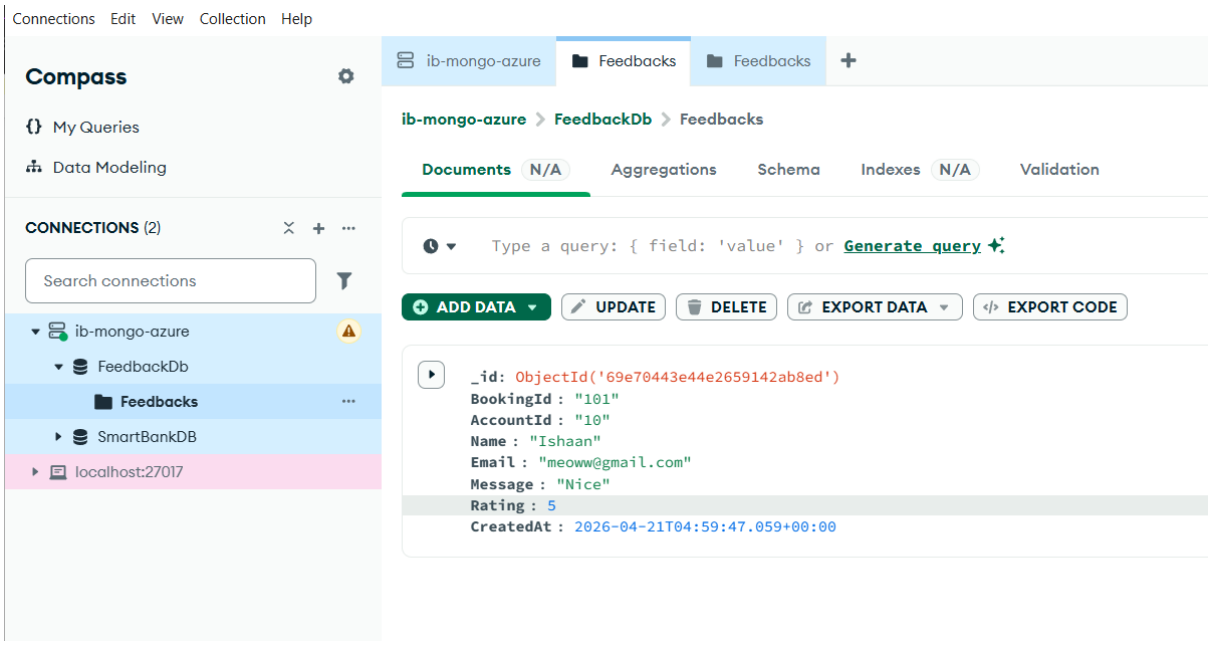
```
    "Logging": {
        "LogLevel": {
            "Default": "Information",
            "Microsoft.AspNetCore": "Warning"
        }
    },
    "AllowedHosts": "*",
    "MongoDbSettings": {
        "ConnectionString": "mongodb://ib-cosmosaccount:vdpcHqGlcev9QnJmnMe5iZIz2xjYnmclbgCFVACBmG2iMTl3JiPs4bqDuXZKwlWLaz3yoIEi1HVSACDb9Qce
        "DatabaseName": "FeedbackDb",
        "CollectionName": "Feedbacks"
    }

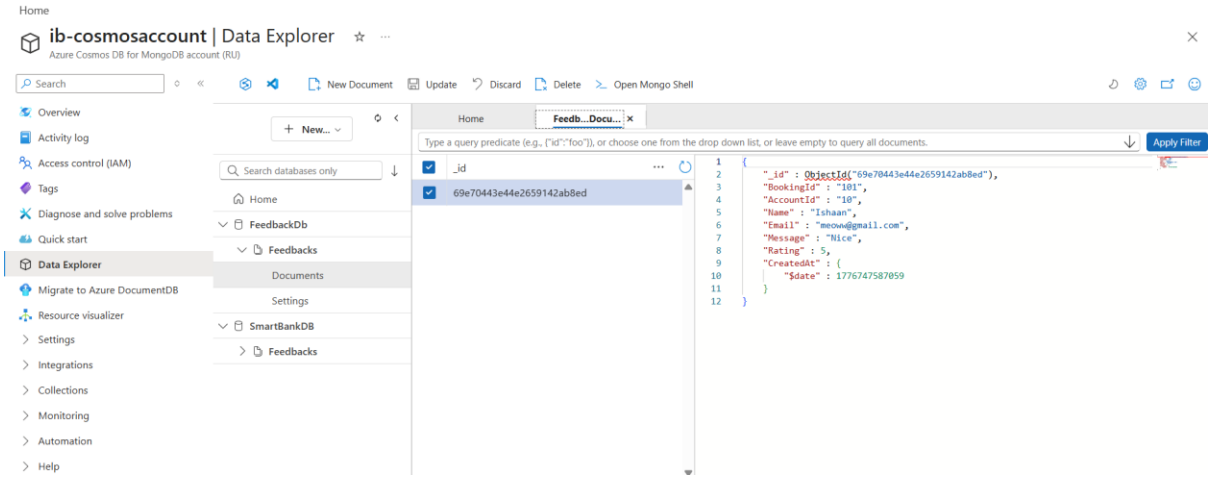
}
```

6. Inserting the Feedback Values in MVC



7. Checking in Local Mongo DB





8. Checking on the Azure Portal
